

Mihael Pleško

Backend Infrastructure Engineer & Frontend Developer

mihahrv@pm.me +0996624588 linkedin.com/in/mihael-pleško github.com/MihaelBLKN

SUMMARY

Build frontend and backend systems for products that must survive real load: code that handles traffic without falling over, shipped without unnecessary polish. Most recent work centers on backend: game-facing systems processing 100+ events per second, and services built to stay stable under real concurrent load, not just look good in a demo. Architecture stays simple; complexity is pushed toward persistence boundaries only when truly needed.

SKILLS

Frontend

Responsive, accessible UI development.

Databases

Schema design, reliable storage.

Backend

APIs and server-side logic that scale.

Infrastructure

Containers, Kubernetes, deployment.

EXPERIENCE

Senior Backend Engineer, SomethingStudio

2024 – 2026

- Built backend systems for a live multiplayer game, processing 100+ event updates per second.
- Achieved 99.9% successful event delivery while cutting manual operations by 40%.

Backend Engineer, Blackout Innovations

2023 – 2024

- Designed highly concurrent backend services supporting 150+ concurrent players at 150 events/sec.
- Cut processing latency from 120ms to 40ms and reduced server-side errors by 35%.

SELECTED PROJECTS

GO · KUBERNETES · LUAU · THREE.JS

Luaxis

No practical Roblox course existed with an in-browser Luau runtime. Built on Go with backends designed for distributed systems, plus Docker for infrastructure. Reached 100+ capacity users at 99.98% uptime.

TYPESCRIPT · KAFKA · OPENAI API

Smart Academic Tutor

Online learning platforms lacked real-time feedback and were priced too high. Built a microservice architecture with a central recommendation engine analyzing student interactions for personalized learning paths, lifting engagement 30% and learning outcomes 20%.

EDUCATION

School of Art, Design, Graphics and Apparel

Zabok, Croatia · High School — 3rd grade (current)
